

SOIL-CHECK - SC FULL

Dear customer!

We are pleased and congratulate you on your purchase, whereby we also wish you lots of fun and success in working with this soil check set!

Please be sure to read all the instructions before you start the tests, which are possible with SC Full. Please also read the enclosed manual for every test, so you get optimal test results and right diagnostic values!

The following tests are possible with the so called *Full-Edition*:

- ph-level (ground water and neutral salt)
- nitrite- and nitrate content
- carbonate content (CaCO₃)
- soil infiltration
- temperature of soil
- check general compactions, soil zones and character of soil (soil probe)

NOTE: Observe the enclosed application instructions and storage conditions! Compliance is essential for ensuring storage life.

HINT: Values, which you get during your own measurements and which you compare with the enclosed table, are standard values! This means, that your methods on the fields are just indicators for a trend, they do not replace a test in a laboratory!

ADVICE: If there are values, which are recurrent and noticeable, it would be worth some thinking to talk to an expert of soil science or to an agricultural consultant. Some values can be influenced by natural factors!

ADVICE: To get closer information about the official liming objectives in your area and to accomplish the requirements of the organic agriculture, please feel free to contact the following institutions:
